Copy and complete the sentence below by adding a main clause.

As the team trudged through the blinding snow and biting cold, ...

Did You Know?

The Antarctic Plateau is the coldest, windiest and most lifeless place on Earth. It was first sighted in 1903 during an expedition led by Captain Robert Falcon Scott. The South Pole is located on the Antarctic Plateau and is at the southern end of Earth's axis. The axis is an imaginary line through the centre of Earth around which the planet rotates. Although Scott reached the South Pole in 1912, he and his expedition team died on their return journey from exhaustion, starvation and extreme cold.
