Rewrite the sentence below so that it is in the active voice.

The Arctic tern is admired by wildlife enthusiasts for its remarkable migratory journey.

Did You Know?

The Arctic tern makes an epic journey each year from the Arctic Circle to the Antarctic Circle and back again. It does so to avoid the polar winters, which are too dark and cold for hunting food. This remarkable bird is known for having the longest migration of any animal, covering up to 71,000 kilometres annually. Arctic terns use the Earth's magnetic field and sun positioning to navigate their way across such vast distances.

Number Challenge

- An Arctic tern will travel an estimated 2.4 million kilometres in its lifetime. That's around three round-trip flights to the Moon!

Around how many kilometres away is the Moon from Earth?

Critical Thinking

The journey is more important than the destination.

Is this sometimes, always or never true? Why do you think this?
