

Morning Starters: Spring 1 - Flowering Plants

Word Challenge

Look, Say, Cover, Write, Check

Use the above strategy to learn the spellings of the words underlined.

Did You Know?

The seven-hour flower is a remarkable botanical wonder that is known for its incredibly brief flowering period. Each flower blossom opens at night, dying after a period of around seven hours. To ensure its survival as a species, the seven hour flower must attract night-time pollinators. The underwood bat is its primary pollinator. It is attracted to the flower's sugary nectar.

Number Challenge

From 22:30 to 04:30, an Underwood's bat fed on the nectar of the seven-hour flower. During this period, it visited a total of 900 flower blossoms.
