Rewrite the sentence below, using the passive voice.

The oxpeckers removed the parasites from the rhino's thick hide.

Did You Know?

It is thought that a rhino's femur (leg) bone is the strongest bone in the animal kingdom. Tests have shown that this bone can withstand a force of 109 tonnes. The incredible strength of this bone helps to support the powerful forces that a rhino generates while moving. However, whilst rhinos have the strongest bones overall, the tiny hero shrew has the strongest bones relative to its size.
