Copy and complete the sentence below with an effective simile.

The lava oozed from the volcano's crater like ...

Did You Know?

Continuously erupting since 1983, Kilauea in Hawaii is the world's most active volcano. It is a shield volcano – a type of volcano named for its shape, which resembles a warrior's shield seen from the side. Due to their runny lava and frequent eruptions, shield volcanoes are much wider than they are tall.

Number Challenge

Here are the lava flow rates of Kilauea over a 3-day period:

- Day 1 – 526 cubic metres
- Day 2 – 425 cubic metres
- Day 3 – 498 cubic metres

What is the mean average lava flow rate for this period?

Critical Thinking

If a volcano could talk, what questions would you ask it?
