

# Morning Starters: Autumn 2 - Climate Change

## Word Challenge

Look, Say, Cover, Write, Check

Use the above strategy to learn the spellings of the words underlined in the 'Did you know?' paragraph.

## Did You Know?

Green turtles, which have swum the oceans of the world since prehistoric times, face an uncertain future due to global warming. This is because the gender of a green turtle depends on the temperature of the sand that incubates the egg. As sand temperature warms due to climate change, there are now far too many female hatchlings. With not enough males in the population, this marvellous marine reptile could soon become extinct.

## Number Challenge

A green turtle laid 160 eggs.

**If 5% of her hatchlings were male, how many were female?**

## Grammar Challenge

Click text to edit 

Turn the following statement into a question.

Turtles communicate through a variety of sounds that include grunts, hisses and clicks.

Credit: BBC REEL

## Critical Thinking

**How could the carbon footprint of your school be reduced?**

**Note:** A carbon footprint refers to the total amount of greenhouse gases, primarily carbon dioxide (CO<sub>2</sub>), that are emitted into the atmosphere as a result of human activities.
