

# Morning Starters: Summer 2 - Night Life

## Word Challenge

The antonym (opposite) of the word 'night' is 'day'.

**Record the antonym of each word underlined in the 'Did you know?' paragraph.**

## Grammar Challenge

Click text to edit 

**Rewrite the sentence below, adding a parenthesis after the word 'badger'.**

The badger tore through the undergrowth in search of worms.

### Example:

The badger (a skilled nocturnal forager) tore through the undergrowth in search of worms.

## Did You Know?

Badgers are nocturnal creatures, emerging at night to forage for worms, insects and small mammals. They have poor eyesight but rely on their keen sense of smell to locate food in the dark. During the day, they retreat to underground burrows called setts, which they dig using their strong claws. These setts can be complex tunnel systems, often shared by multiple generations.

## Number Challenge

**Fact:** In a single night, an adult badger can eat 200 worms!

**How many worms might a badger eat ...**

**1) in a week?**

**2) in a month?**

**3) in a year?**

## Critical Thinking

What would life be like if there was no night?
